

10W500

LF Ferrite Transducer

KeyFeatures

- 98 dB SPL 1W / 1m average sensitivity
- 51 mm (2 in) Interleaved Sandwich copper Voice coil (ISV)
- 280 W AES power handling
- Improved heat dissipation via unique basket design
- Ideal for compact two way and multiway systems

Description

The 10W500 is a low frequency driver designed to satisfy the need for a 10" ferrite loudspeaker combining excellent linearity with good sensitivity and power handling characteristics. The transducer is the evolution of the 10W400, and is primarily recommended for compact bass reflex systems in enclosures as small as 25 lt. The paper curvilinear cone is carried by a dampened linen, triple roll front suspension to control vibration modes that ensures good travel control and linear excursion. The 50 mm diameter copper wire voice coil employs the Interleaved Sandwich Voice coil (ISV) technology, where a high strength fibreglas former carries windings on both the outer and inner surfaces to achieve a mass balanced coil. This results in an extremely linear motor assembly which, in conjunction with the highly advanced design of the magnetic structure, provides a high force factor or BL. Another feature of 10W500 is the fine air channels between the chassis back plate and the top plate of the magnet, which draw heated air out from the voice coil gap and dissipate the energy through the chassis casting. The top and back plates of the magnet assembly have been designed to optimise flux density and BL factor in the air gap using our in-house FEA CAD facility.

Models

Model	Code	Info
0221084310	0221084310	8 Ohm

General Specifications

Nominal Diameter	260 mm (10 in)
Rated Impedance	8 Ohm
AES Power	280 W
Program Power	400 W
Peak Power	800 W
Sensitivity	98 dB
Frequency Range	55 - 4500 Hz
Power Compression @-10dB	0,7 dB
Power Compression @-3dB	1,3 dB
Power Compression @Full Power	2,8 dB
Max Recomm. Frequency	2000 Hz
Recomm. Enclosure Volume	20 - 50 lt. (0,71 - 1,77 cuft)
Minimum Impedance	7 Ohm at 25°C
Max Peak To Peak Excursion	24 mm (0,94 in)
Voice Coil Diameter	51 mm (2 in)
Voice Coil winding material	copper
Suspension	Triple roll polycotton
Cone	Curvilinear ribbed, treated paper

Thiele Small Parameters

Fs	53 Hz
Re	6,0 Ohm
Sd	0,035 sq.mt. (54,25 sq.in.)
Qms	4,22
Qes	0,31
Qts	0,29
Vas	45,2 lt. (1,60 cuft)
Mms	33 gr. (0,07 lb)
BL	14,6 Tm
Linear Mathematical Xmax	± 5,5 mm (± 0,22 in)
Le (1kHz)	0,72 mH
Ref. Efficiency 1W@1m (half space)	96 dB

Mounting information

Overall diameter	260 mm (10,24 in)
N. of mounting holes and bolt	8
Mounting holes diameter	7,15 mm (0,28 in)
Bolt circle diameter	244,5 mm (9,63 in)
Front mount baffle cutout ø	232 mm (9,13 in)
Rear mount baffle cutout ø	232 mm (9,13 in)
Total depth	121,5 mm (4,78 in)
Flange and gasket thickness	14,5 mm (0,57 in)
Net weight	4,7 kg (10,38 lb)
Shipping weight	5,10 kg (11,26 lb)
Packaging Dimensions	275 x 275 x 164 mm (10,83 x 10,83 x 6,46 in)

FREQUENCY RESPONSE CURVE

FREQUENCY RESPONSE CURVE OF 10W500 MADE ON 30 LIT. ENCLOSURE TUNED 55HZ IN FREE FIELD (4PI) ENVIRONMENT. ENCLOSURE CLOSES THE REAR OF THE DRIVER. THE THIN LINE REPRESENTS 45 DEG. OFF AXIS FREQUENCY RESPONSE FREE AIR IMPEDANCE MAGNITUDE CURVE

Notes

- 1) AES power is determined according to AES2-1984 (r2003) standard.
- 2) Program power rating is measured in 30 lit enclosure tuned 55Hz using a 70 - 2000Hz band limited pink noise test signal with 50% duty cycle, applied for 2 hours.
- 3) The peak power rating represents the maximum permitted instantaneous peak power level over a maximum period of 10ms which will be withstood by the loudspeaker without damage.
- 4) Sensitivity represents the averaged value of acoustic output as measured on the forward central axis of cone, at distance 1m from the baffle panel, when connected to 2,83V sine wave test signal swept between 500Hz and 2500Hz with the test specimen mounted in the same enclosure as given for (1) above.
- 5) Frequency range is given as the band of frequencies delineated by the lower and upper limits where the output level drops by 10 dB below the rated sensitivity in half space environment.
- 6) Power compression represents the loss of sensitivity for the specified power, measured from 50-500 Hz, after a 5 min pink noise preconditioning test at the specified power.
- 7) Linear Math. Xmax is calculated as $(Hvc \cdot Hg) / 2 + Hg / 4$ where Hvc is the coil depth and Hg is the gap depth.
