The P Audio 12NT-88MB is a high performance wide bandwidth transducer. The 12NT-88MB is an upgraded design that features many of P Audio's new technologies and performance upgrades. The 12 inch (305mm) diameter piston will produce extremely high sound pressure levels at both low and mid band frequencies and is ideal for high level response in both live sound and recorded music venues. The transducer uses very high energy neodymium magnetics to achieve a very high acoustic output to weight ratio. The 12NT-88MB has been optimized for use in two way or three way sound reinforcement systems and has an operating range of 55Hz to 3500Hz. The 12NT-88MB features a large 3.5 inch (88.9 mm) diameter voice coil that provides an AES rated 1400 watts of continuous program power capacity and a full 2800 watts of peak rated power handling when sufficient amplifier headroom is available. The perfect match of material and geometry mean ultra-low distortion of cone movement and ultra-low distortion of sound. Coating keeps the cone rigid and waterproof during operation. The voice coil design is a bobbin wound geometry with P Audio's Aluminum wire technology to improve conversion efficiency and provide a large crosssectional area for superior cooling. The transducer chassis is a die cast aluminum design that insures a very high degree of structural integrity.
