

6NMB900

High Output Midbass Neo Transducer

KeyFeatures

- 100 dB SPL 1W / 1m average sensitivity
- 44 mm (1 3/4 in) aluminum voice coil
- 200 W AES power handling
- External neodymium magnet assembly
- Single Demodulating Ring (SDR) for lower distortion
- Weather protected cone and plates for outdoor usage
- Improved heat dissipation via Active Cooling System
- Specially designed for line arrays and compact two way applications

Description

The 6NMB900 is the evolution of the 6NMB420 neodymium midbass speaker. This new 6.5 inch neodymium midbass transducer has been designed for mid low frequency reproduction in system designs where high intelligibility is required. 6NMB900 is suitable as mid-bass in line array systems or multiple way systems with high-pass crossover above 200 Hz and low-pass up to 3kHz; enclosure might be closed or vented with volume size starting from 2 lit.

The speaker offers a superb linearity: distortion values are further minimized by new enhanced design criterias, taking the 6NMB900 to very high level of performance.

The extremely powerful external neodymium magnet assembly assures high flux concentration, low power compression and excellent heat exchange. The levels of force factor and power handling are, as a consequence, at the upper professional level with best power to weight ratio.

A consistent heat transfer is guaranteed by the encapsulation of the magnetic structure in the interior of the basket, offering a large contact space between the back plate and the dissipating structure.

Particular efforts were dedicated to the new surround shape and material design, in order to minimize the resonances on mid range frequencies. The new multiroll design offers a consistent damping to typical bell modes.

The 44 mm voice coil is made of light-weight aluminum wire and assures linearity and high power handling.

The ability to perform in humid environments is a key feature of the 6NMB900: this is achieved through a proprietary humidity repellent cone treatment.

Models

Model	Code	Info
022068N420	022068N420	8 Ohm
6NMB900	6NMB900	
022066N420	022066N420	16 Ohm

General Specifications

Nominal Diameter	152mm (6 in)
Rated Impedance	8 Ohm
AES Power	200 W
Program Power	260 W
Peak Power	500 W
Sensitivity	97 dB
Frequency Range	200 - 7000 Hz
Power Compression @-10dB	0,9 dB
Power Compression @-3dB	1,6 dB
Power Compression @Full Power	2,9 dB
Max Recomm. Frequency	5000 Hz
Recomm. Enclosure Volume	2 - 10 lt. (0.07 - 0.35 cuft)
Minimum Impedance	
Max Peak To Peak Excursion	14 mm (0,55 in)
Voice Coil Diameter	44 mm (1,75 in)
Voice Coil winding material	aluminum
Suspension	Triple roll, Polycotton
Cone	Curvilinear, Paper

Thiele Small Parameters

Fs	95 Hz
Re	5,2 Ohm
Sd	0,013 sq.mt. (20,15 sq.in.)
Qms	2,87
Qes	0,36
Qts	0,32
Vas	10,3 lt. (0.36 cuft)
Mms	7,4 gr. (0.02 lb)
BL	8,5 Tm
Linear Mathematical Xmax	± 3 mm (±0,12 in)
Le (1kHz)	0,1 mH
Ref. Efficiency 1W@1m (half space)	96,1 dB

Mounting information

Overall diameter	162 mm (6,38 in)
N. of mounting holes and bolt	4
Mounting holes diameter	5,5 mm (0,22 in)
Bolt circle diameter	170 mm (6,69 in)
Front mount baffle cutout ø	148 mm (5,38 in)
Rear mount baffle cutout ø	148 mm (5,38 in)
Total depth	73 mm (2,83 in)
Flange and gasket thickness	11,5 mm (0,45 in)
Net weight	1,25 kg (2,76 lb)
Shipping weight	1,8 kg (3,97 lb)
Packaging Dimensions	1,8 kg (3,97 lb)

FREQUENCY RESPONSE CURVE OF 6NMB900 MADE ON 2 LIT. CLOSED ENCLOSURE IN FREE FIELD (4PI) ENVIRONMENT. ENCLOSURE CLOSES THE REAR OF THE DRIVER. THE THIN LINE REPRESENTS 45 DEG. OFF AXIS FREQUENCY RESPONSE.

FREE AIR IMPEDANCE MAGNITUDE CURVE

Notes

- (1) AES power is determined according to AES2-1984 (r2003) standard

- (2) Program power rating is measured in 2 lit closed enclosure using a 150-3000Hz band

- (3) The peak power rating represents the maximum permitted instantaneous peak power level over a maximum period of 10ms which will be withstood by the loudspeaker without damage.

- (4) Sensitivity represents the averaged value of acoustic output as measured on the forward central axis of cone, at distance 1m from the baffle panel, when connected to 2,83V sine wave test signal swept between 500Hz and 2500Hz with the test specimen mounted in the same enclosure as given for (1) above.

- (5) Frequency range is given as the band of frequencies delineated by the lower and upper limits where the output level drops by 10 dB below the rated sensitivity in half space environment.

- (6) Power compression represents the loss of sensitivity for the specified power, measured from 100-1000 Hz, after a 5 min pink noise preconditioning test at the specified power.

- (7) Thiele - Small parameters are measured after the test specimen has been conditioned by 200 W AES power and represent the expected long term parameters after a short period of use.

- (8) Linear Math. Xmax is calculated as $(H_{vc}-H_g)/2 + H_g/4$ where Hvc is the coil depth and Hg is the gap depth.
